Why IXIRSWAP?

We are honored to have brought to your presence a unique platform, which is a candidate to be the shining star of the Binance Smart chain network, with many fields of activity that will interest communities. When our platform becomes fully active, it will have the capacity to set up its finance chain, launch outstanding projects on its platform, put its DEX exchange and wallet into service, and pass security audits on all projects operating on the Binance SmartChain network. For this, we have been working behind the scenes for a long time with our team, which has adequate knowledge and equipment. Do not bereave yourself of such a promising project.

WHAT IS IXIRSWAP?

IXIRSWAP is a decentralized cryptocurrency based on the Binance Smart Chain network. It has fields of activity such as DEX exchange, Fairlaunch, Audit, Steaking, and Farming. With this aspect, it is a first in the world.

WHAT IS IXIR FAIRLAUNCH?

We will be in communication with the teams of all the projects that we will launch for you, and we will bring together only the projects that promise high potential and pass the inspection of our experienced team through our platform. To protect our investors, we will add to the liquidity pool ourselves by keeping the amount of liquidity that they promise to add from the projects we will launch, by keeping it blocked. In addition, you will feel much safer in the project with rugbul prevention and bot protection software we have developed for you.

What is IXIR Audit

We will ensure that a safe investment environment is created by meticulously conducting security audits of the projects we will launch for our investors. We will also positively support the price of our platform token, IXIR, by conducting security audits of other projects operating in the Binance Smart chain network, and by repurchasing 50% of the revenue from the liquidity pool. We will give certificates that are valid in the world to companies that pass the security audit.

What is IXIR Staking and Farming?

You will be able to safely stake both our own token IXIR and other BSC tokens with our completely safe and high ratio pools that we will create on our platform.

With the strong partnerships, we will realize, we will offer a farming pool that has made a name for itself in a short time.

WhiteList and Presale Events, Sales Policy

For our investors, we will implement a sales model that is unique to us and that we believe has the fairest pre-sale conditions. Our sale will consist of 4 stages.

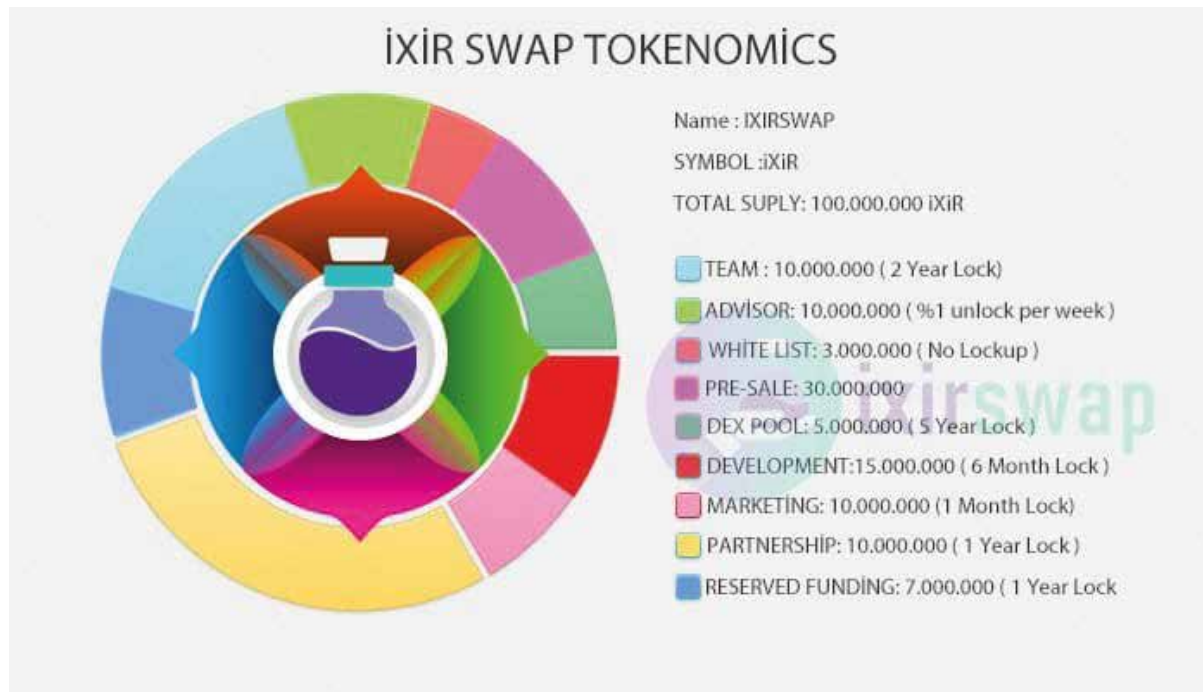

*In the first stage, we will organize a Whitelist tour for the sale of 3% of all our tokens so that the people who are the first to know about the token, therefore the people who support and trust us first, have our token at the most purchasable price. In the Gleim platform, which we have agreed for the white list, the first 100 people will receive a guarantee allocation, while 300 people will be selected randomly, taking into account the interaction score, among the other applicants. Remember that more interactions bring you more luck.

* Secondly, the 1st stage sale of our pre-sale will be made. At this stage, we will offer 5% of our token for sale at our most affordable pre-sale price. Owning the token at this stage guarantees you the best price you can get for the pre-sale.

* In our third pre-sale, we will put on market 10% of our total tokens for sale, at this stage our price will have increased to a certain amount from the previous stage. However, you will still be more advantageous than the sale in the next round. Moreover, the number of tokens sold in the previous round is half of the current stage. This is a sales strategy we have developed to protect our investors.

* In our fourth and final sales stage, we will offer 15% of all our tokens for sale. And this will be our pre-sale with the highest selling price. But don't worry, the rate of people who own tokens at the same price as you are 50% of the entire sale amount.

Tokenomics

The price information we set for the sale;

***Token Total 100,000,000**

***Whitelist Sale Round Price: 0.018 Usd(\$)**

***one. Sales Round Price: 0.024**

***2nd. Sales Round Price: 0.028**

***3. Sales Round Price: 0.032**

*** For each purchase, a person can purchase tokens in the range of 0.5 - 2 BNB. Transactions from multiple wallets are prohibited as per our sales strategy. If detected, tokens will not be sent to subsequent wallets and the deposited amount will be refunded after deduction of transaction costs.**

*General description

As you can see when you examine it, we have worked hard to make a fair pre-sale. And we have kept our price, hence our market cap, low so that all our investors can easily make money no matter what stage they buy our token at. This will help the price of the token to rise easily and attract the attention of fastidious investors. In addition, at the end of the pre-sale period, all unsold tokens will be burned and the proof will be shared with our investors. The duration of each sales round is 7 days, we have determined a total of 1 month during the 4 sales tours. If the number specified for the tour is exhausted before the 7 days are up, the next tour is automatically started and the price is updated and the sale continues. The token listing will be done on the Pancakeswap platform 1-3 days after all planned tokens are sold. Tokens that are not sold within the stipulated time during the sale rounds are transferred to the other sale round and their price is increased.

*Sales Strategy

First of all, we want you to know that we have allocated a very serious marketing budget for the promotion of such a huge platform. We will start our ads with accounts with fewer followers so that more people can buy our token at the most affordable price, and as the process progresses, you will hear the name of our project from many Influencers. Pepered by IXIRSWAP

*Taxes and Deductions

From the first listing, we will charge a 3% tax on token purchases and a 5% tax on token sales. So what are we going to do with this tax? These taxes we collect will be collected in a transparent public pool. With these accumulated taxes, price stability will be maintained by making regular buybacks. That way, those holding an IXIR will always win. A fund that can be intervened immediately in sudden price fluctuations will be kept ready.
